a celebrated economist argues that economic development is not really development unless everyone has the right to consent to their own progress for centuries the developed western world has exploited the less developed rest in the name of progress conquering the americas driving the atlantic slave trade and colonizing africa and asia throughout the west has justified this global conquest by the alleged material gains it brought to the conquered but the colonial experiment unintentionally revealed how much of a demand there was for self determination and not just for relief from poverty in violent saviors renowned economist william easterly examines how the demand for agency has always been at the heart of debates on development spanning nearly four centuries of global history easterly argues that commerce rather than conquest could meet the need for equal rights as well as the need for prosperity looking to the liberal economic ideas of thinkers like adam smith milton friedman and amartya sen easterly shows how the surge in global trade has given agency to billions of people for the first time narrating the long debate between conquest and commerce easterly offers a new and urgent perspective on global economics the demands for agency dignity and respect must be at the center of the global fight against poverty

astatine is besides radon and francium the only natural radioelement which only has short lived isotopes thereby excluding experiments with weighable amounts of the element this implies that all available data on physics and chemistry of this element are  $^{12}_{16}$  based on experiments on the tracer scale with 10 to 10 g and this will also not change in future because no longer lived isotopes as yet known are to be expected due to the fact that the only isotope of at occurring in the natural decay series  $^{219}_{84}\text{At}$  results from the 0 005 a branching of  $^{223}_{88}\text{Fr}$  which itself is produced by the only 1 38 a branching of  $^{227}_{88}\text{Ac}$  a member of the  $^{235}_{92}\text{U}$  series there is no chance to recover substantial amounts of  $^{219}_{84}\text{At}$  from natural sources for scientific

research of at all studies therefore are being done with the isotopes  $^{209}\text{At}$  to  $^{211}\text{At}$  having half lives in the few hours region and being obtained by irradiation of bismuth with  $\alpha$  particles via  $\alpha, n$  reactions or by proton irradiation of heavy elements via spallation reactions the mostly used isotope is  $^{211}\text{At}$  the fast separation of the obtained  $\alpha$  isotopes is no very difficult procedure and is either being done by wet adsorption precipitation techniques or making use of its high volatility by distilling in air
