this book provides an accessible yet rigorous first reference for readers interested in learning how to model and analyze cellular network performance using stochastic geometry in addition to the canonical downlink and uplink settings analyses of heterogeneous cellular networks and dense cellular networks are also included for each of these settings the focus is on the calculation of coverage probability which gives the complementary cumulative distribution function ccdf of signal to interference and noise ratio sinr and is the complement of the outage probability using this other key performance metrics such as the area spectral efficiency are also derived these metrics are especially useful in understanding the effect of densification on network performance in order to make this a truly self contained reference all the required background material from stochastic geometry is introduced in a coherent and digestible manner this book provides an approachable introduction to the analysis of cellular networks and illuminates key system dependencies features an approach based on stochastic geometry as applied to cellular networks including both downlink and uplink focuses on the statistical distribution of signal to interference and noise ratio sinr and related metrics

designed to teach the reader about meta analysis and show them how to conduct one using sas its focus is more applied and practical than theoretical and will include additional programming codes and examples site to house program code and sample ou
